

## Carbon Coded

Accelerating Climate Action with CBDC and Stablecoins  
backed by ESG Assets / Carbon Credits

Smart, Scalable, and Sustainable Financial system

Environment-supporting programmable money

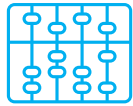

Climate Innovation via futuristic monetary policies and tools

# Climate change demands urgent action, but fragmented solutions leave financial systems disconnected from climate priorities

*The challenge at the intersection of finance and sustainability*

## Climate Action Gap

Traditional financial systems are misaligned with sustainability objectives

## CBDC Limitations

Central Banks and FIs lack the tools for sustainable currency issuance & management

## Fragmentation

No unified framework linking digital currencies with environmental impact metrics

## Stakeholder Needs

Banks, fin. institutions, and enterprises lack a way to integrate climate impact into fiscal ops

# Carbon Coded is an integrated platform to help Central Banks and Financial Institutions holistically issue, distribute, and manage CBDCs linked to Carbon Credits and ESG Assets

*An integrated platform for impactful finance*

## Holistic Management

Issue, distribute, and manage CBDCs linked to Carbon Credits and ESG assets

## Sustainability by Design

Built to embed environmental impact directly into financial systems

## Blockchain Transparency

Full traceability and trust in sustainable finance. Privacy maintained.

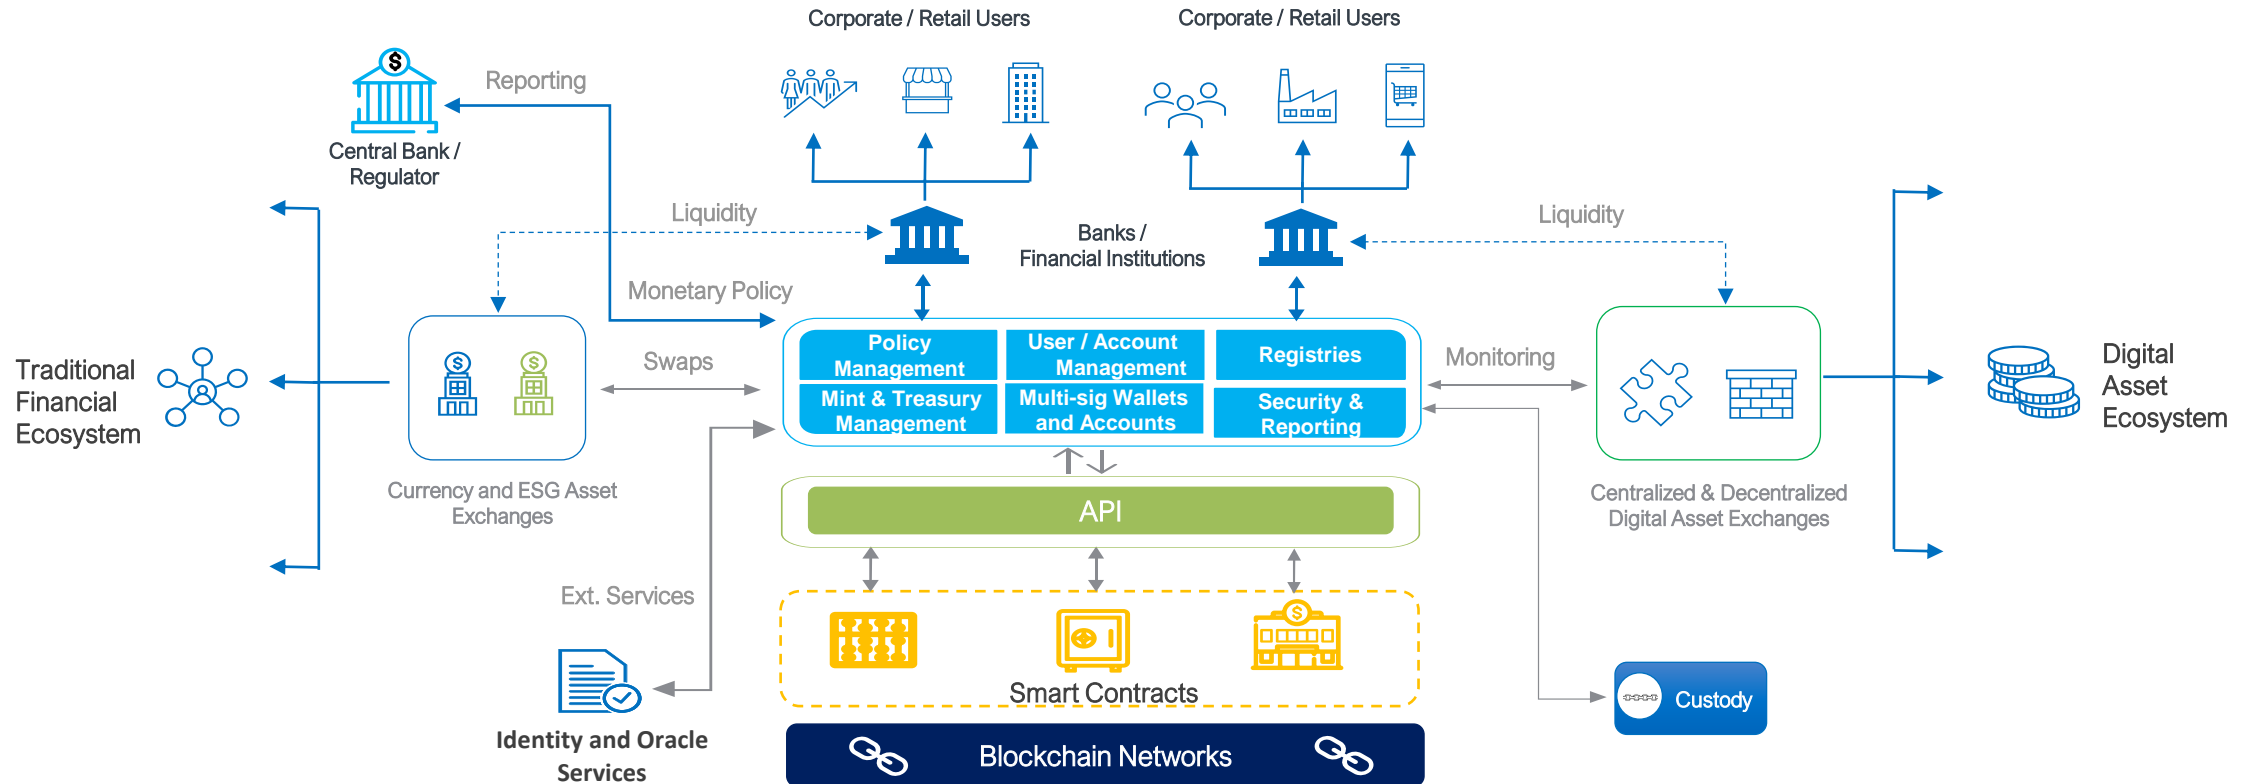

## Stakeholder Benefits

A next-gen stable digital fiscal instrument for banks, governments, and citizens

Our **Two-Tier CBDC Framework** empowers **public-private** partnerships and enables digital cash to be designed by central banks but issued and distributed by financial institutions

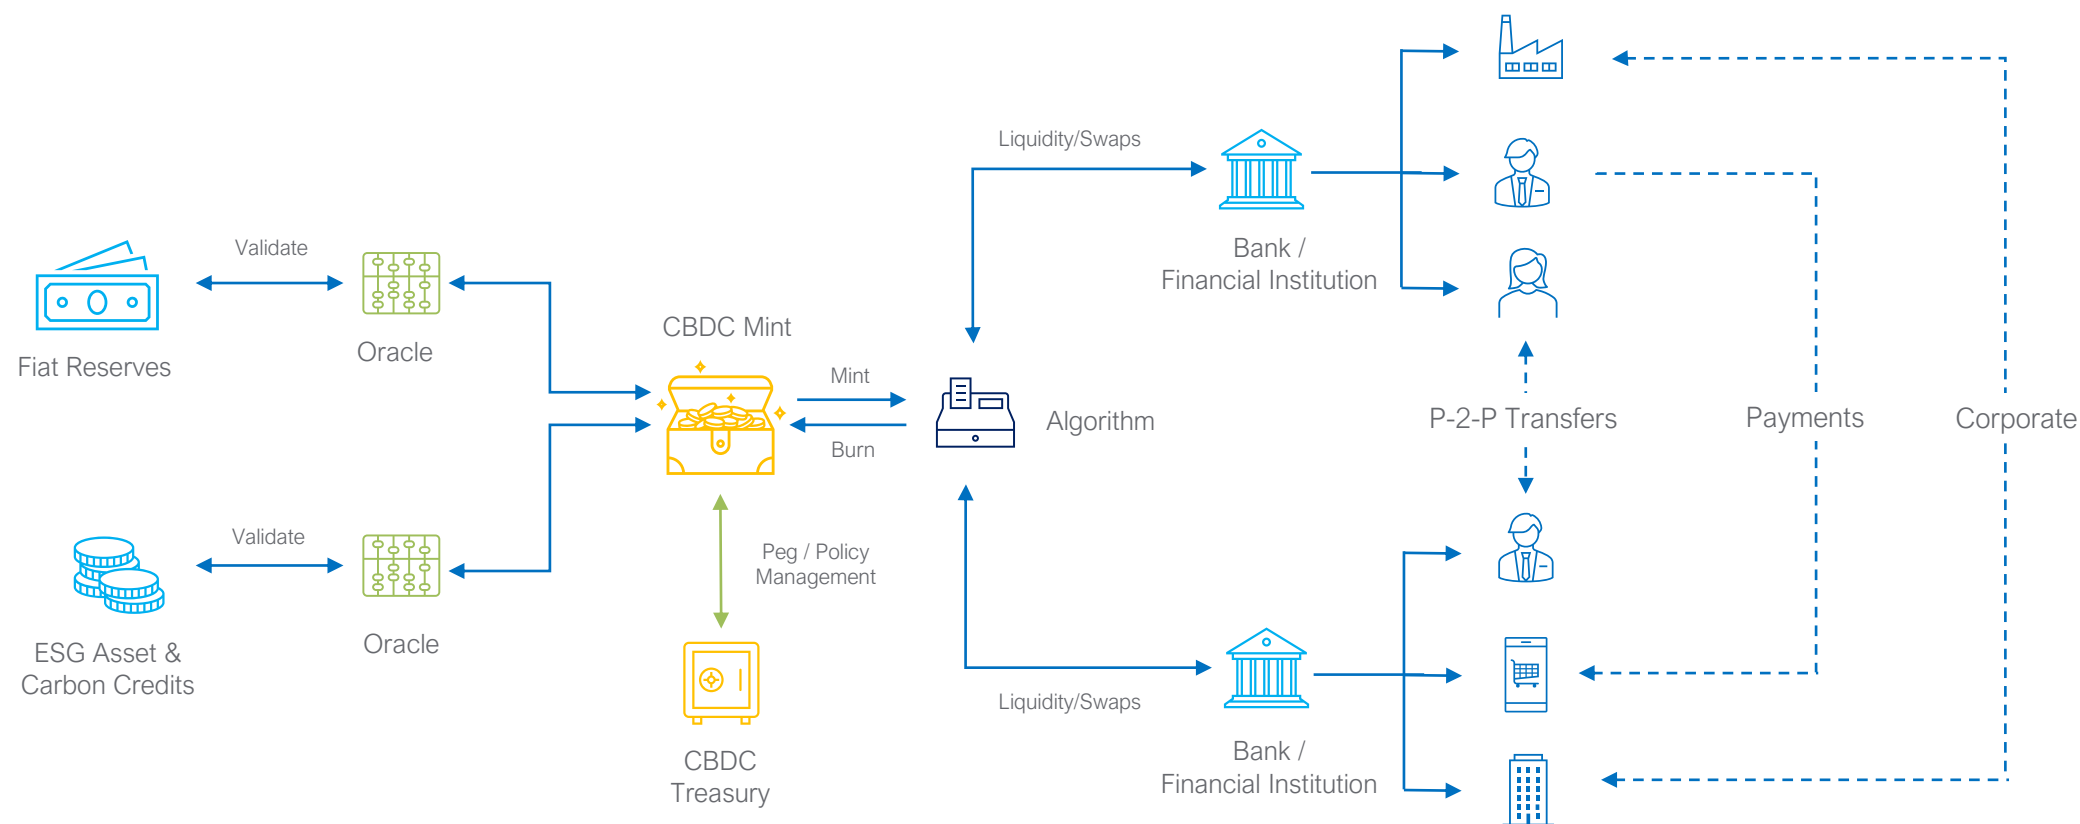

### *The Framework*

Digital currencies, denominated in the domestic unit of account, would be privately issued and managed, although fully backed with central bank reserves and ESG assets, and monitored centrally

From P-2-P transfers and everyday payments to corporate transactions, the platform empowers a cohesive financial ecosystem that's innately supports the sustainability cause

*How it all comes together*

The platform operates on a Gen-3 Blockchain network, providing a robust, scalable, and programmable infrastructure with inherent privacy features, optimally designed for CBDCs

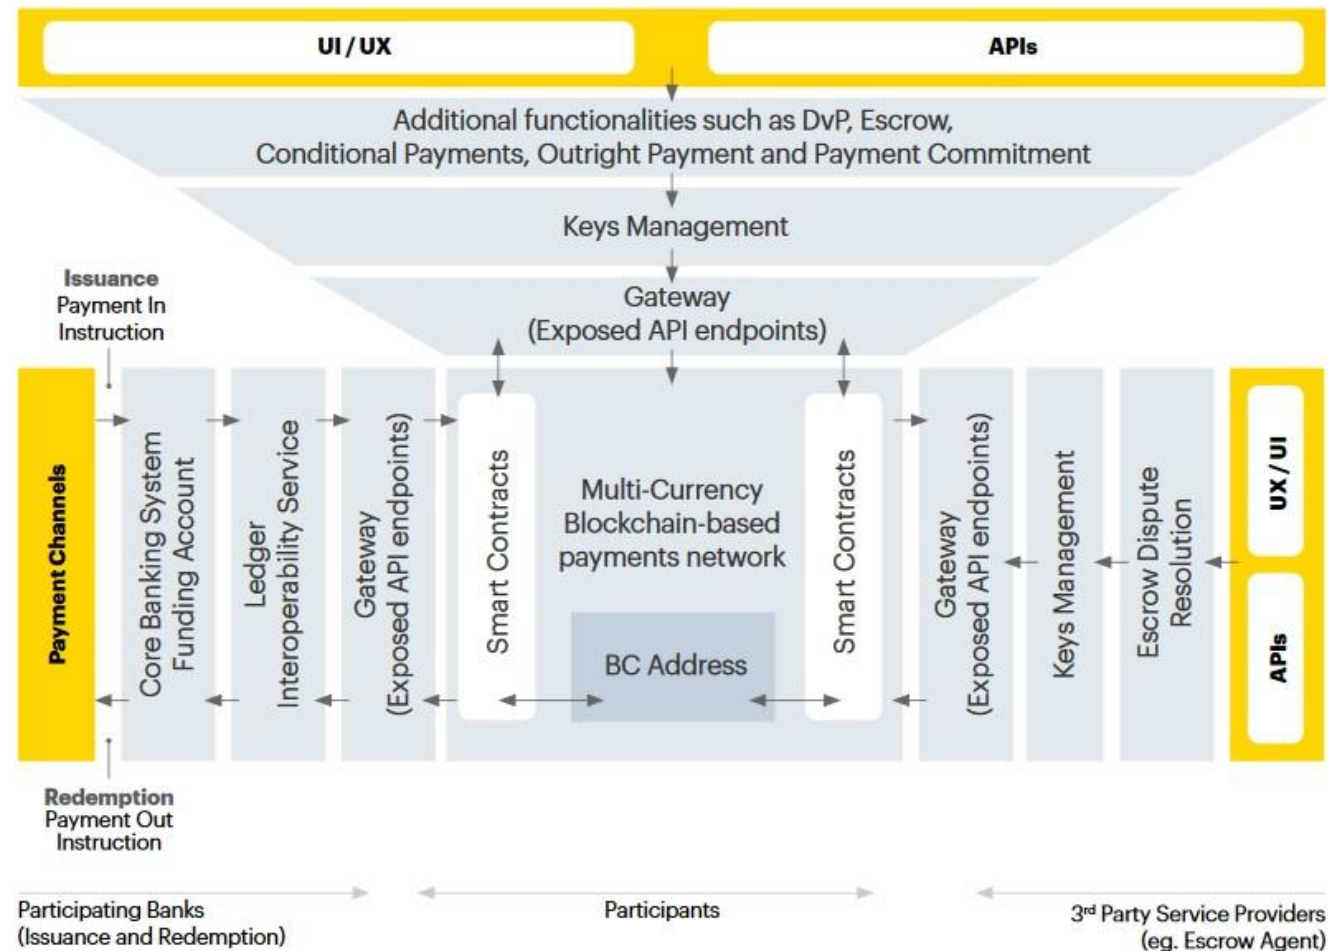

### Key Features

Programmable smart contracts seamlessly enable automation and facilitate settlements while a well-orchestrated set of distributed nodes provide a highly available network for all users

We largely follow the Monetary Authority of Singapore's Project Ubin framework, building upon and extending the work done across five inter-related components

... *ledger interoperability service, gateway communication service, blockchain ledger, user connectivity interfaces, & digital currency*

**Carbon Coded** is dedicated to integrating sustainability into the very fabric of the financial system, thereby amplifying our collective efforts to combat climate change

*We're making digital money better:*

#### Central banks

Facilitate climate action  
through integrated  
digital fiscal tools

#### Financial Institutions

Manage sustainable  
assets and liabilities  
seamlessly

#### Corporates

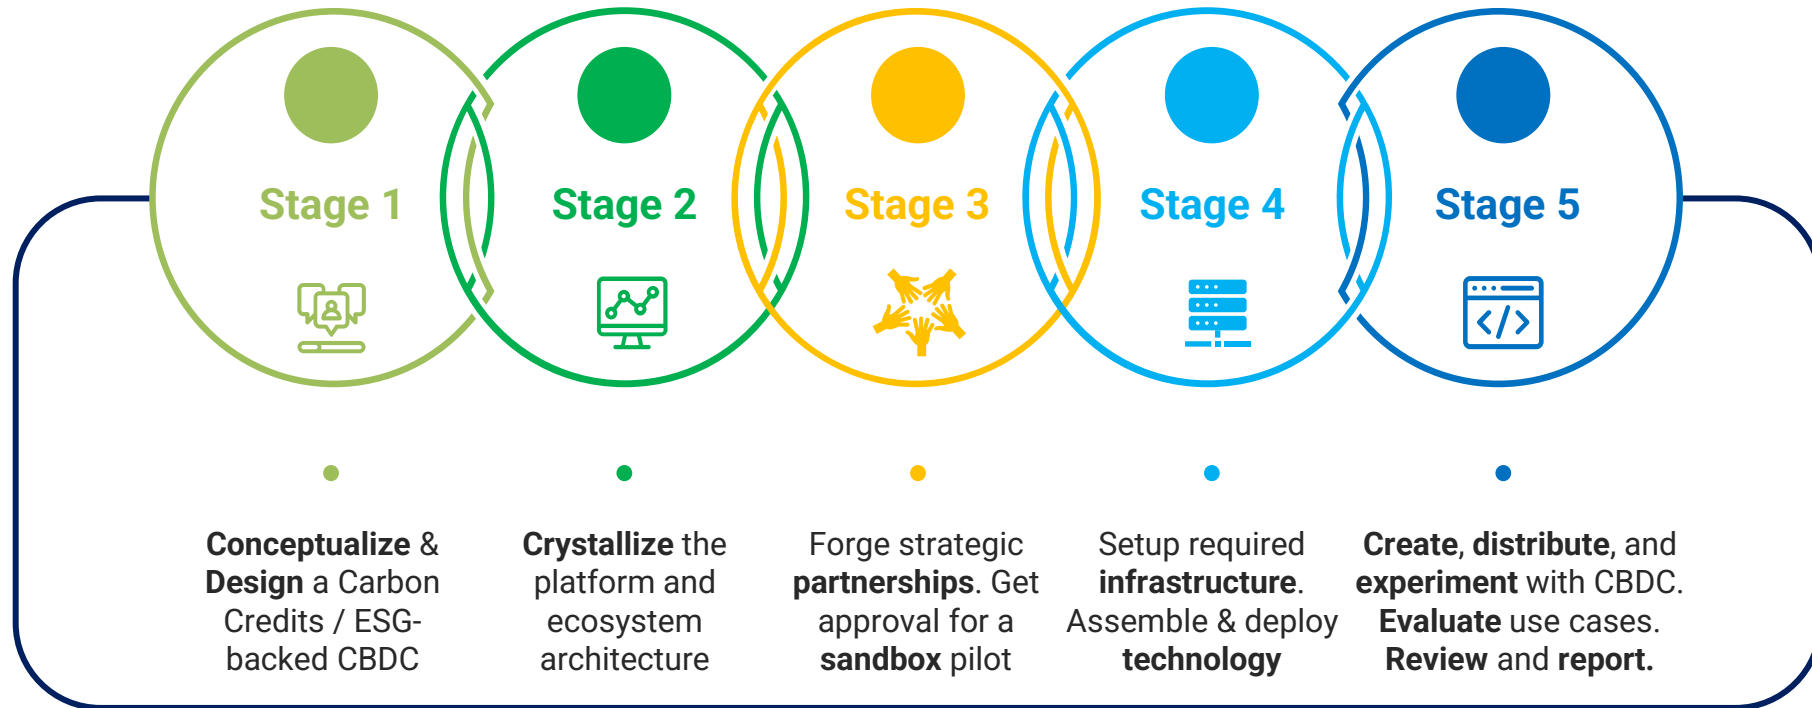

Meet ESG goals and  
accelerate the journey  
to Net Zero

Let's make our planet sustainable, one ESG-backed CBDC at a time!

**What Next?** We have crafted a novel approach to a global challenge and are eager to collaborate with institutions to jointly pilot the solution in a sandbox environment

*The Roadmap*

We are also enthusiastic about partnering with forward-thinking organizations in progressive jurisdictions, aiming to collaboratively discover new ways to expand our platform's utility, particularly in diverse applications of Carbon / ESG-Assets backed CBDCs

Join us on this journey as we enable a new digital currency paradigm and pave the future of financial markets
